 <p>The image shows the chemical structure of Fmoc-orn(pyrazic)-oh. It consists of a pyrazole ring connected via an amide bond to a 3-hydroxypropyl chain. This chain is further connected via another amide bond to a chiral auxiliary, specifically a fluorenylmethyl (Fmoc) group. The Fmoc group is a fluorene derivative with a methylene group at the 9-position, which is attached to the nitrogen of the second amide bond.
