

[CAS No.: 10402-53-6] Eprazinone dihydrochloride

 <p>The image shows the chemical structure of Eprazinone dihydrochloride. It consists of a central piperazine ring. One nitrogen atom of the piperazine is substituted with a 1-phenylethyl group (a benzene ring attached to a CH group, which is further attached to a CH₃ group). The other nitrogen atom of the piperazine is substituted with a 1-phenylethoxy group (an oxygen atom attached to a CH group, which is further attached to a CH₃ group and a benzene ring). Two H-Cl molecules are shown, indicating the dihydrochloride salt form.</p>	CAS No. :	10402-53-6
